THE

Chapmans and Travellers ALMANACK

For the Year of *CHRIST*

1694.

Wherein all the Post-Roads, with their several Branches and Distances, the *Mart*, *Faire*, and *Markets* in *England* and *Wales*, are *Alphabetically* disposed in every Month; so that the Place *where*, and the Day on *which* any of them are *kept*, is immediately found out.

To which is added

A TABLE of ACCOUNTS READY CAST UP,

For the *Buying* and *Selling* of any *Commodity*, by *Number*, *Weight*, or *Measure*, from One *Farthing* to Ten *Pounds*; and of any *Quantity*, from One to Ten thousand.

With a Sun-Dial, and other Tables and Things Useful for All *Travellers*, *Traders*, or *Chapmen* whatsoever.

ALSO

The Rising and Setting of the Sun and Moon, the Tides, and whatsoever else is necessary for an Annual ALMANACK.

LONDON, Printed by *T. R.* for the Company of STATIONERS 1694.

A Brief CHRONOLOGY.

IN the Fifth Column of this *Almanack*, you have the *Age* of the *Moon* standing against every day in the Year, by help whereof and this little *Table*, you may nearly find

I. At what hour and minute the Moon will be just in the South, either evening or morning.

II. How many hours and minutes she will *shine*, either at night or next morning.

III. At what time the Moon *riseth* or *setteth*.

IV. The *hour* of the *night*, by the *shadow* of the *Moon* upon any *Sun-Dial*.

I. To find at what time the Moon will be due South.

Example, Upon the 23 of *March*, the Moon being then 10 days old, I would know at what time the Moon will be upon the *Meridian* or *South*.

Look in the first Column of this Table for 10, the *Moons Age* increasing, and right against it in the second Column, you shall find 8 hours 0 m. at which time the *Moon* will be just *South* in the evening.

II. To find how long the Moon shineth.

Example, Upon the 21 of *March*, the Moon that day being 6 days old, I would know how many hours and min. she *shineth* that night.

Look for 6 (the *Moons age*) in the first Column of this Table, and right against it (in the third Column) you shall find 4 hours 48 min. and so many the *Moon shines* that *Evening*, being Full Moon increaseth.

III. To find at what time the Moon Riseth and Setteth.

For the Moons Rising.

1. If the Moon be increasing, that is, if she be less than 15 days old, *adde* the hours and minutes of her *shining*, to the hours and minutes of the *Suns Rising*, and the sum will be the time of the *Moons Rising*. But

2. If the Moon be decreasing, that is, if she be above 15 days old, *substract* the hours and minutes of her *shining* from the hours and minutes of the *Suns Rising*, and the remainer will be the time of the *Moons Rising*.

Example. Upon the 22 of *March* the Moon is 7 days old, and the time of her shining is 5 h. 36 m. which added to 5 h. 40 m. the time of the *Suns Rising* that day, the *Sun* will be 11 hours 16 min. at which time, that day, the *Moon will rise*. But upon the 30 of *March*, the Moon being then 24 days old, the time of *her shining* is 4 hours 48 min. which substracted from 6 hours the Suns Rising that day, there will remain 1 h. 12 m. in the morning, for the time of her *Rising*.

For the Moons Setting.

1. If the Moon be less than 15 days old, *adde* the time of *her shining* to the time of the *Suns setting*, the sum is her *setting*. But

2. If the Moon be above 15 days old, *substract* her *shining* from the *Suns setting*, the remainer is her *setting*, adding 24 hours if need be. So upon the 18 day of *May*, the Moon being 24 days old, she will be found to set at 11 h. 12 m. at night; and upon the 20 of *May* the Moon then being 26 d. old, she will be found to set at 4 h. 38 m. the next morning. And the hour of the Night by the *Moons shine* on a Sun-Dial.

Find at what time the Moon comes to the South as before, which knows by how much the Shadow of the Sun wants of 12, which take from the time of the Moons coming to the South, and remainer is the hour of the night: if the Shadow be past 12, add those hours to the coming to the South, and the Sum is the hour of the night.

Example. Upon the 19 of *April*, the Moon being 13 day old, and comes to the South at 10 h. 24 m. and that night I find the Shadow at 9 h. 30 m. which wants 2 h. and 2 half of 12, wherefore take 2 h. 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the night. But if the Shadow had been past 12, as 13, those added to 10 h. 24 m. would make 12 h. 54 m. for the hour of the night.

A Table of Interest for several Sums of Money, at the rate of 6 in the Hundred, for divers Months and Days, Viz.

The Uſe of the SUN-DIAL.

FOr the ready finding of the hour of the Day by this *Dial*, you muſt provide a ſtreight Staff or Ruler, which muſt firſt be divided into 3 ten equal parts, and then each of thoſe into ten other ſmaller parts; ſo will the whole Staff or Ruler be divided into 100 equal parts, which may be numbred by 10, 20, 30, *&c.* to 100: And ſo is it fitted for Uſe.

Now when you would find the hour, you muſt erect your Staff or Ruler perpendicular, that is, ſet it upright upon ſome plain level ground, floor, or table, and note the place where the end of the ſhadow did fall, and with your Staff meaſure the length of the ſhadow in Seven lengths, and hundred parts of the length, according as 'tis numbred.

Example, Suppoſe that upon the 16 day of *January* I do erect my Staff perpendicular, and meaſuring the length of the ſhadow thereof, I find it to be exactly 3 times its length; wherefore, finding the 16 day of the top of the moneth of *January*, I find 3, 0 to ſtand againſt the 16 day, and at the top find XII, which tells me it is then juſt 12 a Clock. —— *Example* 2. Suppoſe that upon the 6 of *May* I erect my Staff as before, and meaſuring the ſhadow thereof, I find it to be twice the length of the Staff, and 24 parts more; wherefore, I look at the top of the Dial for *May*, for the 6 day, and caſting my eye along that line, towards the right hand, I find 2, 24, to ſtand in that Column, at the top of which is VII, V, which tells me it is either 7 of the Clock in the morning, or 5 in the afternoon. —— *Example* 3. Upon the 16 of *April*, I find the length of the ſhadow to be once the Staffs length and 30 parts more; I look in *April* for the 16 day in the Sun-Dial, and in the line againſt it for 1, 30, and againſt it in the fifth Column I find 1, 33 (which is the neareſt number neareſt to 1, 30, in the Table) over which there ſtands IX and III, which ſhews that it is almoſt 9 in the morning, or a little after 3 in the afternoon. —— *Example* 4. Upon the 26 of *June* I find the length of the ſhadow of the Staff to be once the whole length, and 20 parts; if I look for this number 1, 20, in the Sun-Dial againſt the 26 of *June*, I can find no ſuch number, but the neareſt to it leſs in that line is 1, 01, over which ſtands IX, III, and the neareſt number to it, greater, is 1, 38, over which ſtands VIII, IV; ſo that you may conclude the hour to be between 8 and 9 in the morning, or between 3 and 4 in the afternoon. A little practice will make all this plain: *Fot Uſus optimus Magiſter.*

THis Table will serve for many good purposes, but it is here principally intended for the Chapmans use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, *&c.* And its use is very easie; as by

EXAMPLE I.

At 9 d. the Yard, what will 70 yards come to?

Look for *9 d.* at the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, and under *9 d.* you shall find *2 l. 12 s. 6 d.* And so much will 70 Yards at *9 d.* the Yard come to.

Also, *At 5 d. the Gallon, 500 Gallons will come to* 10 l. 8 s. 4 d.

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and adde them together, and the sum shall answer your Question.

EXAMPLE II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

	l.	s.
70 Dozen at 7 *s.* comes to	24	10
8 Dozen at 7 *s.* comes to	2	16
The Sum	27	06

So that 78 Dozen at 7 s. the Dozen, come to 27 *l.* 6 *s.*

EXAMPLE III.

At 3 s. 5 d. 3 q. the Ell, what will 300 Ells come to?

	l.	s.	d.
300 Ells at 3 *s.* comes to	45	0	0
300 Ells at 5 *d.* comes to	6	5	0
300 Ells at 3 *q.* comes to	0	18	9
The Price of 300 Ells	52	3	9

EXAMPLE IV.

At 7 d. halfpeny the Pound, what will 92 Pound come to?

	l.	s.	d.
90 Pound at 7 *d.* the Pound, comes to	2	12	6
2 Pound at 7 *d.* the Pound, comes to	0	01	2
90 Pound at a halfpeny, comes to	0	03	9
2 Pound at a halfpeny, comes to	0	00	1
The Price of 92 Pound, at 7 *d.* 2 *q.*	2	17	6
